

Supplementary readings for Lecture 2

I've added some supplementary reading for Lecture 2. Chapter 5 covers matrices, which we covered in Lecture 2. Everyone should read through Section 5.7. There are bits in here that might be mathematical challenging for some, so I've tried to add a pictorial representation if possible. The more mathematically advanced students are encouraged to read the entire chapter.

Chapter 6 covers rotations and affine transformations. Please read Sections 6.1-6.3 and Section 6.12. Please also read at least the first paragraph of 6.13. If you're comfortable with the math finish that section. Also read section 6.14.

Comments for Lecture 3 readings

Chapter 23 covers basics of diffusion.

Sections marked with an asterisk (*) are not required.
